

G-TECH 385

SMAW

SUPERAUSTENITIC STEELS

904L

DESCRIPTION

Rutile coated electrode to match fully austenitic alloy 904L

It is used for welding of 904L alloy and gives fully austenitic weld metal with good resistance to corrosion in inorganic and organic acids. Typical applications include tanks and vessels, piping, cast pumps, valves and other components used in fertiliser, phosphoric, sulphuric and acetic plants, and in salt and seawater environments. It also used in some offshore applications. Its rutile-basic coating ensures an excellent combination of welding performance in all positions, except for vertical down, and a high resistance to cracking providing smooth arc transfer.

SPECIFICATIONS

The information in this datasheet is the result of detailed research and is considered accurate as of the publication date. However, we cannot guarantee its complete accuracy, and it is subject to change without notice. Actual results may vary due to many factors like welding procedures, material composition, temperature conditions, bevel configuration, and specific manufacturing techniques. We accept no liability for any errors or omissions in this datasheet. For the most current information, please visit www.daikowelding.com.

DAIKO

904L

DESCRIPTION

SUPERAUSTENITIC STEELS
904L

APPLICATION

Known for delivering a fully austenitic, low-carbon weld metal enriched with Mo and Cu, these consumables exhibit exceptional resistance to corrosion in sulphuric, phosphoric, and various inorganic and organic acids. Not the typical choice for environments demanding resistance to concentrated nitric acid, they excel in scenarios involving severe chloride pitting media, where opting for overmatching nickel base weld metal, such as alloy 625, is recommended. Noteworthy as the preferred weld metal for certain lower alloy austenitics like Creusot UHB 34L and UHB 734L, especially in wet process phosphoric acid service, these consumables find versatile applications. Their usage spans tanks, process vessels, piping systems, agitators, rotors, and cast pumps and valves, catering to the needs of fertilizer, phosphoric, sulphuric, and acetic acid plants. Additionally, they prove invaluable in salt and seawater environments and are enlisted in select offshore applications, including overlays on mild and low alloy steels. The welding process mandates no preheat or post-weld heat treatment (PWHT), with interpass temperatures carefully regulated to a maximum of 150°C. It's crucial to exercise control over heat input, especially when utilizing larger diameter shielded metal arc welding (SMAW) electrodes.

ALLOY TYPE

904L is a nominally 20%Cr-25%Ni-5%Mo-2%Cu alloy with good corrosion resistance.

MICROSTRUCTURE

In the as-welded condition the weld metal microstructure is fully austenitic.

MATERIALS

Suitable for copper-free variants of the listed alloys and also to overmatch leaner alloys such as 317L, 317LN, 317LM, 317LMN, 1.4439, 1.4440 and S31726.

EN W.Nr.: 1.4505 (X4NiCrMoCuNb20-18-2), 1.4506 (X5NiCrMoCuTi 20-18), 1.4536 (GX2NiCrMoCuN25-20), 1.4539 (X1CrNiMoCuN25-20-5), 1.4585 (G-X7CrNiMoCuNb1818), 1.4500 (G-X7NiCrMoCuNb2520).

ASTM: N08904.
